Preface

The 16th edition of the International Meiofauna Conference, codenamed IcIMCo, is hosted in 2016 by HCMR, the Hellenic Centre for Marine Research and the Institute of Oceanography in Heraklion, Crete, Greece.

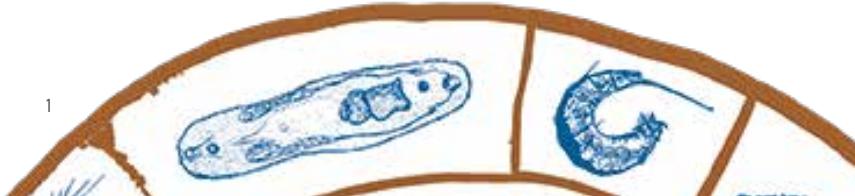

Previous conferences have been held in Tunis, Tunisia (1969), York, England (1973), Hamburg, Germany (1977), Columbia, USA (1980), Ghent, Belgium (1983), Tampa, USA (1986), Vienna, Austria (1989), Maryland, USA (1992), Perpignan, France (1995), Plymouth, England (1998), Boston, USA (2001), Ravenna, Italy (2004), Recife, Brazil (2007), Ghent, Belgium (2010) and Seoul, South Korea (2013).

As has been always the case, IcIMCo will once again provide an opportunity for scientists and students from all over the world to present and discuss the latest developments in our tiny but fascinating meiofauna world within the context of a dramatic global change and the world-wide ever-increasing pressures and uses of aquatic ecosystems and resources.

This year, 69 oral and 94 poster presentations are included in the program, which are distributed over 24 countries and 133 corresponding authors. They cover a wide range of different research fields, such as the response of meiobenthos to environmental changes, climate change and acidification, biodiversity and ecosystem function, morphology, phylogeny and biogeography, amongst many other 'hot' topics. They reflect the growing interest and trend in using meiofauna to address larger questions and problems. All in all, IcIMCo is a great opportunity to make our small invisible alien creatures, visible to the outer world.
